SYSTEMS™

**SMART
DIAGNOSTICS™**

**DRAMATIC VEHICLE DIAGNOSTIC RESULTS:
A SMART WAY TO MONITOR AND MAINTAIN
YOUR FLEET VEHICLES.**

SmartDIAGNOSTICS is a window into your vehicles' health, fuel consumption and driving characteristics. By using a powerful on-board data stream mining software, **SmartDIAGNOSTICS** is like having your vehicles connected to a mechanic's computer diagnostic unit 24/7. **SmartDIAGNOSTICS** is a tool that:

- Connects directly into the vehicle's computer.
- Samples data every 10 minutes, analyzes, and reports any detected anomalies.
- Detects problems even before the engine's fault codes appear.
- Suggests repairs to improve the vehicle's miles per gallon.
- Transmits data to the Agilis-hosted MineFleet® server.
- Displays diagnostic reports on the Agilis web portal.
- Provides both summary and detailed diagnostic data.
- Available with **Smart LOCATE**, **SmartDISPATCH** or **SmartWORKS**.

Benefits Include:

- Reduces downtime, improving the company's overall operational efficiency
- Keeps vehicles running in peak condition reducing operational and capital expense
- Enables better decision making with actual vehicle efficiency and diagnostic data
- Provides the tools for getting the best miles per gallon out of fleet vehicles

**PROVIDES SUMMARY AND
DETAILED DIAGNOSTIC DATA**

Summary	
Overall Health Status	There are 5 potential vehicle health problems.
Vehicle Health Problems	The most recent tests that failed were: 1. Oxygen Sensor Operating Condition Monitor 2. Idle Air Control 3. Quantitative Fuel Management Monitoring 4. Vehicle System Temperature Monitor 5. Transmission Lubricating Systems Monitor Please click on Vehicle Health Tests History for more information.
Fuel Mixture Level	This vehicle is Fuel Lean.
